S: in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes

NP: in case that a species is no longer present in the site enter: x (optional)

Type: p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)

Abundance categories (Cat.): C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

The SCI includes a big carst area in the southwest foothills of the Balkan Range Mountains. The most important natural areas here are the Dragoman and Aldomirovtzi Marshes (the only marshes with carst origin conserved in Bulgaria, restored in the last decade), the carst hills Chepun, Tri Ushi, etc. and the wet meadows between Golemo Malovo and Tzruklevtzi. Important rock formation are found next to Belidie Han. On the northern slope of Chepun natural broad-leaf forests are conserved.

4.2 Quality and importance

The SCI conserves 100% of the national area of habitat 7230. The SCI is one of the most important for the protection of the priority habitat 40A0 and other priority habitats associated with the same conditions 91H0, 6110, 6210, 6240. It

is the only site in the Sofia Plane where *Spermophilus citellus* will be protected.
